

3. Extract code from selected objects

As we've already seen, you can call meta-reactive objects within `withMetaMode()` to extract their code.

But this was just for demo purposes—in most cases you'll use a smarter, higher-level function called `expandChain()`.

withMetaMode

- When !! is applied to `input$xxx`, the value is inlined.
- When !! is applied to a `metaReactive` read operation, the corresponding code is inlined.
