

## 2. De-reference reactive reads using !!

Use !! to replace some code with its value.

```
> dataset <- metaReactive({  
+   get("package:datasets", !!input$dataset)  
+ })  
  
> withMetaMode(dataset())  
get("package:datasets", "pressure")
```

We'd rather have the *value of* input\$dataset here, not *literally* input\$dataset

2. De-reference reactive reads using !!
