3. Extract code from selected objects

As we've already seen, you can call meta-reactive objects within withMetaMode() to extract their code.

But this was just for demo purposes—in most cases you'll use a smarter, higher-level function called expandChain().

withMetaMode

- When!! is applied to input\$xxx, the value is inlined.
- When !! is applied to a metaReactive read operation, the corresponding code is inlined.
