Converting R script to Shiny

```
downloads <- reactive({</pre>
  cranlogs::cran_downloads("ggplot2",
    from = Sys.Date() - 365, to = Sys.Date())
})
downloads rolling <- reactive({</pre>
  downloads %>%
    mutate(count = zoo::rollapply(count, 7, mean, fill = "extend"))
})
output$plot <- renderPlot({</pre>
  ggplot(downloads_rolling, aes(date, count)) +
    geom line() +
    ggtitle("Seven day rolling average")
```

Converting R script to Shiny

```
downloads <- reactive({</pre>
  cranlogs::cran_downloads(input$packages,
    from = Sys.Date() - 365, to = Sys.Date())
})
downloads_rolling <- reactive({</pre>
  downloads() %>%
    mutate(count = zoo::rollapply(count, 7, mean, fill = "extend"))
})
output$plot <- renderPlot({
  ggplot(downloads_rolling(), aes(date, count)) +
    geom line() +
    ggtitle("Seven day rolling average")
```
