## Rscript

```
downloads <- cranlogs::cran_downloads("dplyr",
    from = Sys.Date() - 365, to = Sys.Date())

downloads_rolling <- downloads %>%
    mutate(count = zoo::rollapply(count, 7, mean, fill = "extend"))

ggplot(downloads_rolling, aes(date, count)) +
    geom_line() +
    ggtitle("Seven day rolling average")
```

## Approach 1: Copy and paste

Create and maintain two separate artifacts: Shiny app and R Markdown report

- Second Easy to understand
- Reproducible code is high fidelity
- Two copies of code to keep in sync
- Will not work for more dynamic apps (i.e. not only changing parameters, but changing instructions)
